

Saving Grace Floral Cabin

Saving Grace Floral Cabin needed help modernizing their company, so we helped by developing a website to grow their business.

The Site

The site maintains a consistent and appealing design intended to welcome customers to the site.

The site includes:

- Custom Ordering Page
- Storefront
- Ecommerce integration (using PayPal)
- and About and FAQ pages for more information

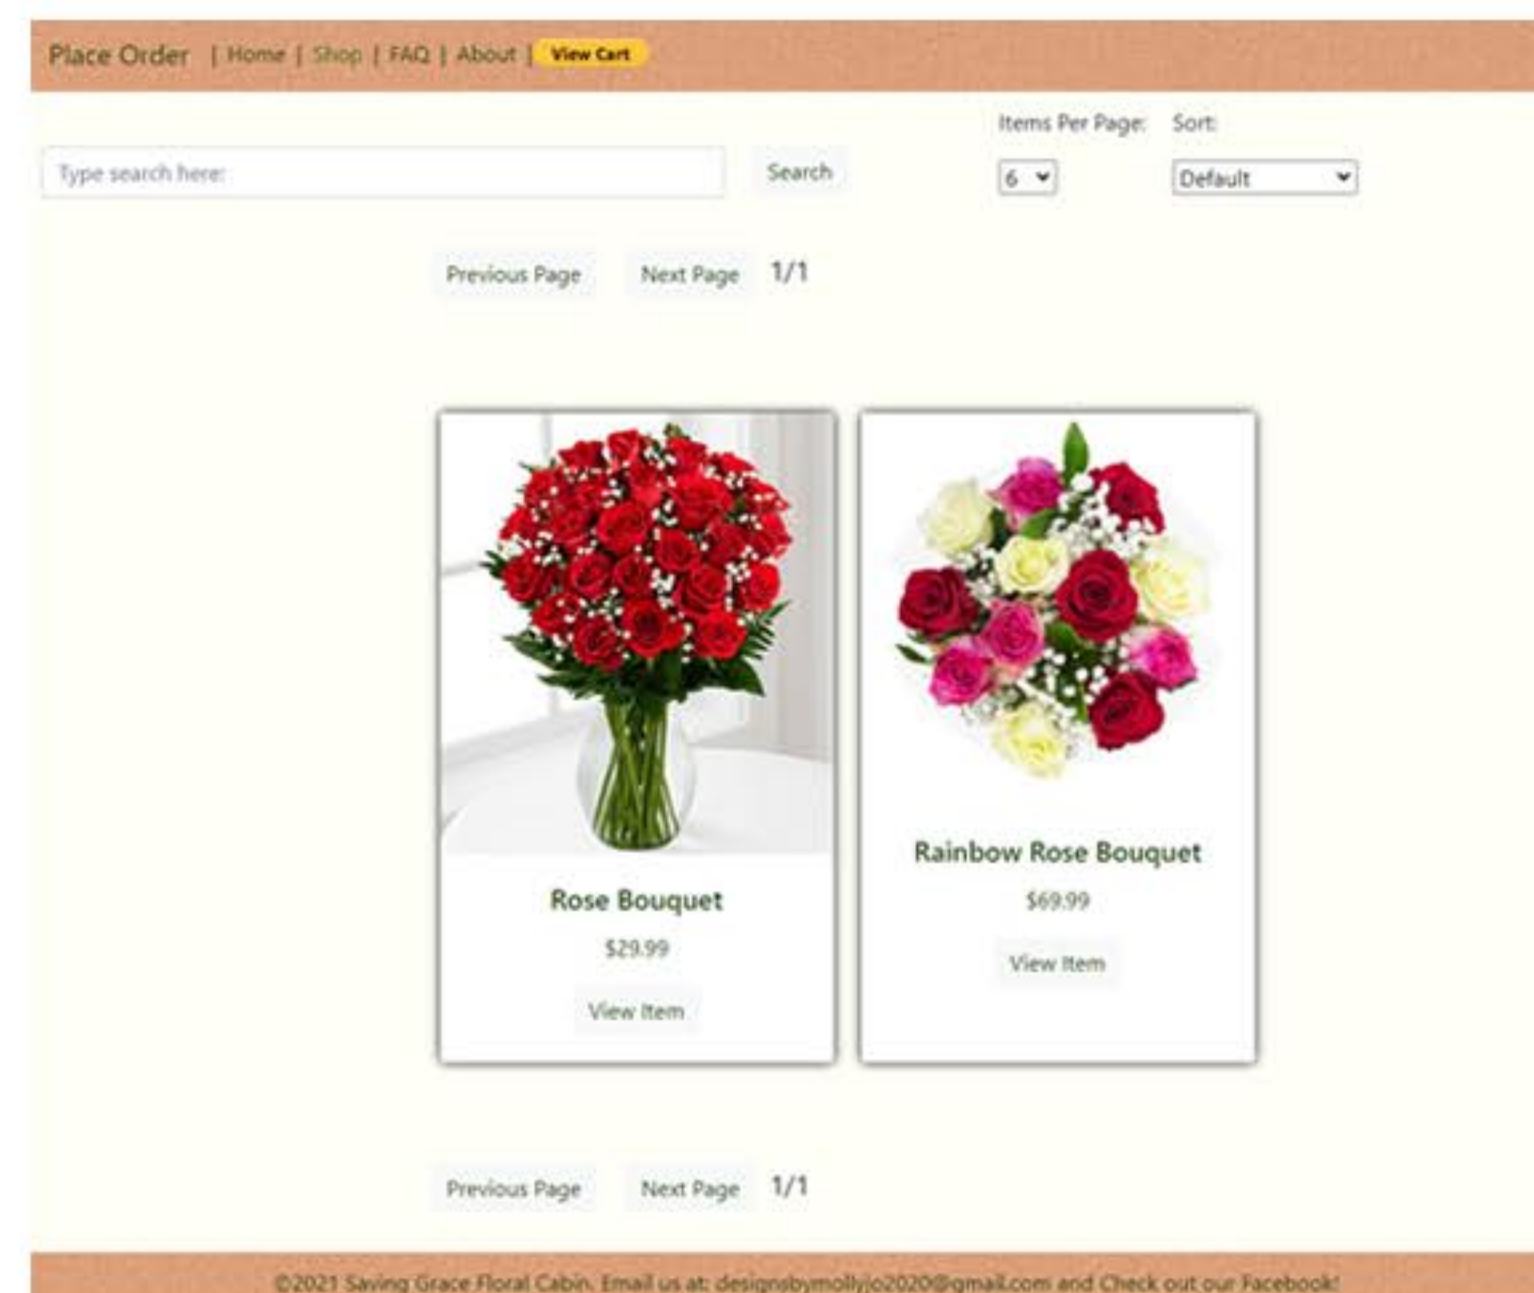

The site is connected to a database for easy update of storefront items and stock keeping.

The Storefront

The page lists all items that the floral cabin would like to put up as a permanent item for sale on the store. The store front is connected to a database that stores all item and stock information for different bouquets and arrangements along with stock of individual flowers.

The storefront has options for:

- Display of different items per page
- Sorting of items by price
- and Search functionality

PayPal was chosen as a ecommerce option to handle purchase of items.

Please fill out the form below with your request.

We'll get back to you with a quote as soon as we can.

Thank you, and have a blessed day!

Custom Orders

Options for custom orders have been added to let customers email our client about specific arrangements options and get more information.

We chose to use formsubmit.co to handle the backend of sending emails back to the client.

Development

This site was developed by:

Rio Woolston - *Computer Science*

Developed the backend side of the site including the database and storefront functionality using php

Randy Keaton - *Computer Information Science*

Developed most of the frontend including each webpage and developed the design.

Jacqueline Seeley - *Computer Information Science*

Kept records for documentation, worked on the frontend functionality, including PayPal buttons, and got in contact with the client.
